

Bespoke

Bespoke Interior Steel Window

TA London based architect chose to make dramatic use of steel windows to form a screen between the main bedroom and en-suite bathroom within her own apartment. West Leigh manufactured and installed the bespoke design solution. The screen was produced in hot-dip galvanized W20 sections which were polyester powder coated with a RAL grey finish. It has been glazed with 4mm toughened float glass and measures 3200 mm by 2164 mm high. There is a single leaf door to access the en-suite, hung on brass hinges and fitted with satin chrome ironmongery, including single handles, and a friction top arm.

West Leigh - Total Window Care

Bespoke windows are the right solution

Many pre-1940s your windows are causing problems with distortion, deep-seated rust and general corrosion.

These windows were manufactured prior to galvanising and powder coating techniques which protect and preserve today's modern product.

Often these windows are fitted into listed facades and buildings are great historical and national importance many being of unique design. The slim sections are significant and important feature of our overall architectural heritage.

Unsympathetic and thoughtless replacement have caused irreversible disfigurement to much of the countries building stock. However, it is in most instances possible to replicate the original designs with modern steel window sections having the additional benefits of galvanising, weatherstripping, polyester powder coating and double glazing. They preserve both the building special characteristics and its beauty.

As part of TOTAL WINDOW CARE, West Leigh has since the 1940s built up a wealth of experience in this sector of the market and have advertised many clients and architects on such schemes.
